

Beacon Registration...

S A R S A T

Is Your Beacon Registered???

Some reasons why registration is SO important:

- **Required by law**
- **Provides an immediate SAR response**
- **Saves SAR resources**
- **Allows us to know who is in possible distress**
- **Allows us to contact YOU**

Is Your Beacon Registered???

If your EPIRB, ELT or PLB registration has expired, or if any information has changed in the two years since NOAA last contacted you...then you should contact us!

By our NEW online registration:

www.beaconregistration.noaa.gov

By Phone: 1-888-212-SAVE or 1-301-817-4515

Or, by Fax: 1-301-817-4565

NOAA's On-line Beacon Registration Database (RGDB)

NOAA/SARSAT PROGRAM

Introduction

- Reasons for having the on-line Registration Database
- Other key requirements implemented
- Key screens for the on-line Database
- Timeline for the Web Based System
- Suggestions on How Beacon Manufacturers and Resellers can help

Reasons and requirements for having the Online Registration Database

- NOAA USMCC requires a system that automates & facilitates processes for:
 - Registering 406 MHz emergency beacons
 - Robust system to handle anticipated dramatic increase in 406 MHz registrations after 01 February 2009
 - Increase time for USMCC personnel to actively pursue contacting owners that have registrations with expired decals
- The life-and-death nature of SAR demands that the system:
 - Provide high reliability and system responsiveness flawlessly
 - Protect against viruses, hackers, and other threats
- Public policy adds requirements for:
 - Equal access for all operators and users
 - Privacy of personal data
 - Government Paperwork Elimination Act
- Cost-management considerations call for:
 - A COTS-intensive, low-maintenance design
 - Compatibility with existing USMCC hardware and system software

Online RGDB Considerations Implemented

- System shall allow a hundred concurrent beacon owners to be logged onto the system.
- System shall be available 99.5% of the time.
- System shall assure the security of the information.
- System shall be secure from unauthorized changes.
- Access to the System shall be controlled by a password for user validation.
- Access to parts of the System shall be determined by class of users.
- Users shall not be directly connected to the Registration Database at anytime for security reasons.
- An Intrusion Detection capability shall exist.

Authentication For Different Type Of Users

- Protection of data within the site
 - NOAA and SAR users will be authenticated by User ID and password
 - Beacon owners will be authenticated by beacon ID and password OR beacon ID, owner name and home telephone number (first time only)
 - Block users will be authenticated by Block ID and password
 - Beacon owners, NOAA and SAR user accounts will be “locked” (deactivated) if the specified number of unsuccessful attempts are exceeded

A User-Friendly Interface

NOAA 406 MHz BEACON REGISTRATION DATABASE SYSTEM

[Need help with this page?](#)

Beacon Owners

Please note that a Beacon ID is required to use the on-line system.

Click [New Registration](#) to register a new beacon.

Click [Access Beacon Previously Registered By Mail](#) to create a password for an existing beacon registration that was registered by mail.

Click [Access Beacon](#) to access existing beacon registration data.

Click [Access Block of Beacons](#) to access a block of existing beacons registration data.

Click [Create Block Account](#) to create a beacon block user account

Click [Forms](#) to get electronic versions of beacon registration forms.
